natural oiled floor

CLEANER NATURAL SOAP (1 lt. package)	51,00	€/each
RESTORE PROTECTIVE OIL CARE (1 lt. package)	76,00	€/each
MAINTENANCE DECKING OIL (2,5 lt. package)	190,00	€/each

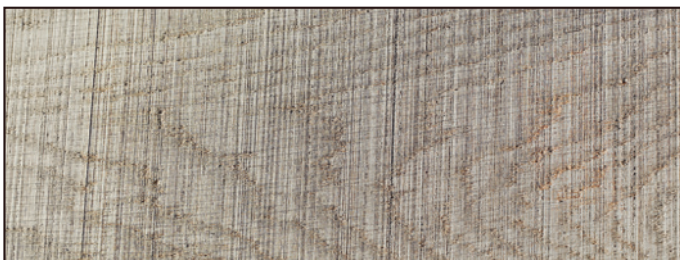

BRUSHED

It's a mechanical processing performed on the superficial part of the hardwood top layer, made in order to obtain a timber cleaning and to enhance the presence of shallow "scratch" veining.

This is the technique most commonly used to preserve over time the surface quality of the floor. On request you can have a **deep brushing** that gives the product a more natural look with the exaltation of the wood grain.

TOTAL SAWN CUT

The aesthetic characteristic of the total sawn cut is achieved through the craftsmanship of brushing and serration of each plank, so highlighting the surface irregularities.

PARTIAL SAWN CUT

The aesthetic characteristic of the partial sawn cut is achieved through a surface of approx. 50% of the total supply and mixed with other material only brushed varnished \ oiled.

HANDSCRAPED

The hand-scraping is among the oldest beautification techniques, already used in the past because is one of the few techniques possible even in absence of machine tools; even today is carried out with the same spirit and in accordance with the tradition in which the main characteristic of the surface irregularities is the fundamental element.

NATURAL OXIDATIVE OILING

Finish that ensures a good protection of the surface while maintaining the natural appearance of wood. It gives naturalness to the entire floor and with the proper products, it's easy to repair.

It requires a subsequent oiling after the installation; maintenance must be carried out with specific Original Parquet products.

UV OILING

This treatment allows to obtain with in-line coating, finishes of similar appearance to those obtained with natural oils, compared to which, has better chemical and mechanical characteristics and resistance to stains. The treatment requires no maintenance other than normal cleaning with neutral soap and nurturing with specific Original Parquet products.

UV VARNISHING

This is a treatment carried out by applying a transparent lacquer, fixed with UV lamps and applicable in line with roller coater, specially formulated for engineering parquet finish. Its main features are fullness, hardness, high resistance to scratching and abrasion.

Depending on the number of GLOSS you can get the look:

SATIN

SEMI-GLOSSY

The treatment requires no maintenance other than normal cleaning with neutral soap and nurturing with specific Original Parquet products.

STANDARD - PRIME GRADE △

SOUND KNOTS SIZE:	≤8mm DIAMETER	All the characteristics are allowed without limits of dimensions or quantity if they do not compromise the resistance or the quality of wearing resistance of parquet floors. The "Standard - Prime" grade represents the strictest selection levels of Original Parquet. The lamella constituting the hardwood top layer of the plank is taken from the central section of the trunk showing a very clean aesthetic aspect that enhances the striped and flamed parts of the sheared section, with the sporadic presence of some knot almost always sound and having small dimensions. * knot splits and holes caused by knots larger than 3 mm must be filled.
UNSOUND FILLED KNOTS SIZE *:	≤2mm DIAMETER	
GROUP KNOTS:	ALLOWED	
FILLED DEFECTS:	ALLOWED	
DARK LINES SIZE:	≤5mm x 100mm	
DARK LINES QUANTITY:	≤2 PER PLANK	
TONAL VARIATION:	LIMITED	
SPLITS / CRACKS:	NOT ALLOWED	
MEDULLARY RAYS (MIRRORS):	ALLOWED	
SAPWOOD FREQUENCY:	≤15% OF PLANKS	
SAPWOOD SIZE:	≤10% IN WIDTH	
INSECT DAMAGE:	NOT ALLOWED	

RUSTIC - SELECT GRADE □

SOUND KNOTS SIZE:	≤50mm DIAMETER	All the characteristics are allowed without limits of dimensions or quantity if they do not compromise the resistance or the quality of wearing resistance of parquet floors. The "Rustic - Select" grade of Original Parquet, coming from the central and median section of the trunk, is composed of the selection of sound and unsound knots with limitations in terms of dimensions and appearance. This selection tends to enhance the naturalness of the sawn trunk, limited to the criteria described above. * knot splits and holes caused by knots larger than 3 mm must be filled.
UNSOUND FILLED KNOTS SIZE *:	≤50mm DIAMETER	
GROUP KNOTS:	ALLOWED	
FILLED DEFECTS:	ALLOWED	
DARK LINES SIZE:	UNLIMITED	
DARK LINES QUANTITY:	UNLIMITED	
TONAL VARIATION:	LIMITED	
SPLITS / CRACKS:	NOT ALLOWED	
MEDULLARY RAYS (MIRRORS):	ALLOWED	
SAPWOOD FREQUENCY:	≤20% OF PLANKS	
SAPWOOD SIZE:	≤10% IN WIDTH	
INSECT DAMAGE:	NOT ALLOWED	

FREE CLASS GRADE FC

SOUND KNOTS SIZE:	UNLIMITED	All the characteristics are allowed without limits of dimensions or quantity if they do not compromise the resistance or the quality of wearing resistance of parquet floors. The "Free Class" grade turns out to be the most varied and complete among the grades of Original Parquet. The elements constituting the hardwood top layer of the planks are taken from the totality of the trunk. The selection that emerges presents natural features of strong impact that represent all the natural representation of wood coming from the most varied sections of the trunk. * knot splits and holes caused by knots larger than 3 mm must be filled.
UNSOUND FILLED KNOTS SIZE *:	UNLIMITED	
GROUP KNOTS:	ALLOWED	
FILLED DEFECTS:	ALLOWED	
DARK LINES SIZE:	UNLIMITED	
DARK LINES QUANTITY:	UNLIMITED	
TONAL VARIATION:	UNLIMITED	
SPLITS / CRACKS:	UNLIMITED	
MEDULLARY RAYS (MIRRORS):	ALLOWED	
SAPWOOD FREQUENCY:	UNLIMITED	
SAPWOOD SIZE:	≤20% IN WIDTH	
INSECT DAMAGE:	NOT ALLOWED	

SOUND KNOTS

Knots that maintain their "natural" appearance even after cutting the trunk.

UNDOUND KNOTS

Knots that lose their core after cutting the trunk. The hole formed is then filled.

GROUP KNOTS

Smaller grouped knots that do not exceed 10 mm diameter. Considered as one knot.

DARK LINES

Discolouration due to minerals within the soil. Could also be elongated knots or black grain.

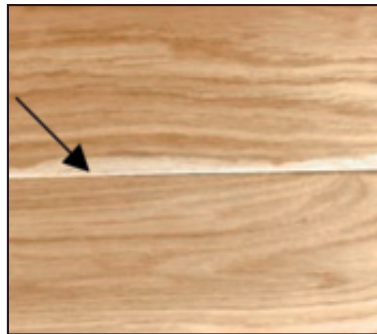

SPLITS

The centre of the heartwood can show natural splits as it is the most dried part of the trunk.

MEDULLARY RAYS

Also called mirrors, they are the tissues that enable the transportation of nutrients to the centre of the trunk.

SAPWOOD

Soft wood generated by the change of trees during the annual period of resumption of vital activities; it is made of living tissues.

TONAL VARIATION

Chromatic effect in which the older and darker central sections of the tree are in contrast with the younger and lighter outer sections.

Original Parquet repeats every selection process of its materials every day, executing the selection of each single plank several times in each department, to ensure that it complies with all the selection criteria defined by the Company. Wood being a natural material, it is inherently

difficult to guarantee 100% accuracy during the grading process. Original Parquet strives to make this evaluation process as precise as possible, allowing up to a maximum of 5% of planks that do not meet the parameters described above.

general condition of sale

- 1) *The agent or travelling salesman commissions are valid if accepted by the Company with written confirmation.*
- 2) *The quantities required by the Customer are always considered indicative. Under no circumstances will partial boxes or packages be delivered. Delivery quantities will always be calculated on the original full package, with rounding up.*
- 3) *Goods are always transported at Customer's risk, even if delivered free at destination. Hence, any break, damage, loss or delay in the material delivery will always be at the expense of the consignee, who will have to contact the carrier for compensation. Free port agreed deliveries will be carried out using the means of transport considered to be most suitable and cost-effective by the Company. In case of delivery "By train-free on destination rail", the transport costs from the railway station to the goods final place of delivery are at the Customer expense.*
- 4) *The delivery terms are not binding. For this reason, possible delays cannot lead to objections, claims for damage or order cancellations on the Client's part.*
- 5) *Any complaint must be notified by recorded delivery letter within eight days from receipt of the goods. Complaints for already laid materials will not be accepted. Should any defect arise while laying the flooring, the customer will have to suspend the laying immediately and inform our premises urgently, under penalty of forfeiture of all rights. In all cases, the Company duties will never go beyond the withdrawal and substitution of any not yet laid material acknowledged to be faulty.*
- 6) *The wood flooring seasoning varies according to wood type. Unless specific agreements, it can range between 7 and 11 percent (for solid wood) and between 5 and 9 percent (for engineering wood). The Customer is bound to check the material humidity rate at the time of delivery, under penalty of forfeiture of all rights. No claim will be accepted if made at a later time and however for materials whose original package has been opened or tampered with.*
- 7) *The wood colors and shades are to be considered indicative and not binding with respect to the samples.*
- 8) *The price validity depends on cost variations in raw material, freight, transport, harbor fees and labor costs, as well as the exchange rates. Any variation of said elements will entitle the review of the prices indicated in the order or order confirmation. Shall the buyer consider the variation excessive, he has the right to back out of the purchase.*
- 9) *The wood flooring will have to be stored and laid observing the following precautions:*
 - *Sub-floor humidity NOT ABOVE 2% (IN WEIGHT)*
 - *Comparative value 19% KMP ACQUA BOY*
 - *Environmental temperature NOT BELOW 15 °C*
 - *Environmental air humidity NOT ABOVE 65% and not below 40%*
 - *Installation on underfloor heating must take place when the heating is switched off*
- 10) *Place of payment is the Vendor's domicile. All payments will be valid only if made DIRECTLY to the Company. Any delay in the agreed payment deadlines will determine the charging of interests at a rate of 4% above the Official Discount Rate calculated on a yearly basis. The Vendor will also be entitled to suspend any further delivery of goods and cancel the current agreements without need for issuance of a notice of default and without the Customer being entitled to claim for compensation or damage. Unless otherwise agreed, VAT shall be paid within 30 days from goods delivery. All other forms of payment will also be calculated starting from the date of delivery, regardless of the invoice issue date.*
- 11) *Contracts are considered closed in Alfonsine (RA) even if drafted elsewhere and the jurisdiction of the Court of Ravenna is recognized with the exclusion of any other Court. None of the payment forms agreed with the Customer can modify such competence..*
- 12) *Management costs for orders lower than 1000 euro are : 50 euro*

Attention:

The tone of sample is always purely indicative and not exhaustively.
